

Documentation for the Special Tabulation of American Community Survey (ACS) Disability and Health Insurance Coverage

Prepared by ACS Special Studies Staff, December 3, 2013

1) This is a tabulation of ACS data from the 2009-2011 3-year file. The data included in this tabulation were collected between January 1, 2009 and December 31, 2011.

2) These data were tabulated at the following geographic summary levels:

- Nation
- State
- County (since this is a 3-year ACS file, we can only show estimates for counties with 20,000 people or more)

3) The rounding schematic for all tables is:

- 0 remains 0.
- 1–7 rounds to 4.
- 8 or greater rounds to nearest multiple of 5 (i.e., 864 rounds to 865, 982 rounds to 980).
- Any number that already ends in 5 or 0 stays as is.
- Any totals or subtotals needed should be constructed before rounding. This assures that universes remain the same from table to table, and it is recognized that cells in a table will no longer be additive after rounding.
